

Extranet™
Dynamic Web Publishing

Improve Communication and Collaboration

The Business Case for Improved Communication

M+Extranet is a powerful web-publishing solution that enables organizations running Novell GroupWise to manage their time and information more efficiently with anyone who has access to a web browser, including non-GroupWise users, inside or outside the organization. M+Extranet is a simple, yet smart and powerful application that dynamically publishes any GroupWise calendar or folder information, address books, and meeting requests from any GroupWise account or resource to the web. The M+Extranet solution helps organizations securely share information with others – all from one place. It is the solution many GroupWise administrators have been waiting for. Finally, they can share information stored inside GroupWise with virtually anyone. M+Extranet is an extremely efficient and cost-effective solution for posting up-to-the-minute content on a company intranet site, client extranet site, or student portal.

Realtime Interactive Features

Unlike other solutions, M+Extranet is dynamic, so the GroupWise information published is always up-to-date. There are no jobs to run, no separate databases to maintain, no files to update manually. Best of all, anyone using GroupWise can make their information available on the web. The interactive features of M+Extranet allow non-GroupWise users to create calendar appointments, send email notifications, and send messages to GroupWise users in real time.

Blogging/RSS/Podcasting

With M+Extranet, end users can now broadcast podcasts or blogs as simply as creating an email message or note in GroupWise. With M+Extranet, GroupWise users now have several choices for disseminating information quickly to a large number of people as a web page or a blog, via a podcast or an RSS feed.

Dynamic Calendars

With M+Extranet, calendars provide a way to view and remain up to date on industry events or personal interest calendars and schedules. You can subscribe to a dynamic calendar and create your own calendars to share with others. M+Extranet allows you to easily create a calendar and publish it to the web to share with others. Invite a group of coworkers, clients, friends, or family to view and work with your calendar so that everyone has the latest information.

Web Portals

With M+Extranet, you can easily create customized web portals where everyone can contribute content or share documents. While traditional portals often require tedious content duplication and complex training on authoring tools, M+Extranet enables you to create a fully-functional web portal in minutes.

Enhanced Usability and Flexibility

A completely redesigned, easy-to-use Welcome Page showcases the publishing features of M+Extranet in real time. This provides an ideal starting point for end users who want to easily customize HTML templates, colors, fonts, page headers, and page footers to suit the needs of the organization.

The screenshot shows the M+Extranet web interface. At the top left is the M+Extranet logo. Below it is a calendar for May 2008. To the right of the calendar is a navigation bar with links for '<< M+Extranet 3.5 installed | Main | test blog >>'. Below the navigation bar is a date 'April 24, 2008' and a heading 'M+Extranet 3.5 installed'. The main content area contains a congratulatory message: 'Congratulations - you have successfully installed Messaging Architects' M+Extranet 3.5. Below this message is a quote: 'M+Extranet has become a key element in our communications strategy.' attributed to Andrea Gilbreath, Tuscaloosa City Schools. To the right of the quote is a list of dynamically published items: 'blogs, public folders'. On the far right is a 'RECENT POSTINGS' section with an 'XML' link and a list of recent posts: 'myfile', 'test.html link', 'test blog', 'M+Extranet 3.5 installed', and 'M+Extranet 3.5 installed'. At the bottom right is an 'ARCHIVES' link.

Complete Event Calendaring and Resource Scheduling

M+Extranet's event calendaring and resource scheduling capabilities can be used in a variety of organizations.

For Government Agencies

- Reserve meeting rooms, equipment, and resources
- Schedule meetings between personnel
- Coordinate interdepartmental training easily and efficiently by combining all program and resource calendars

For Educational institutions

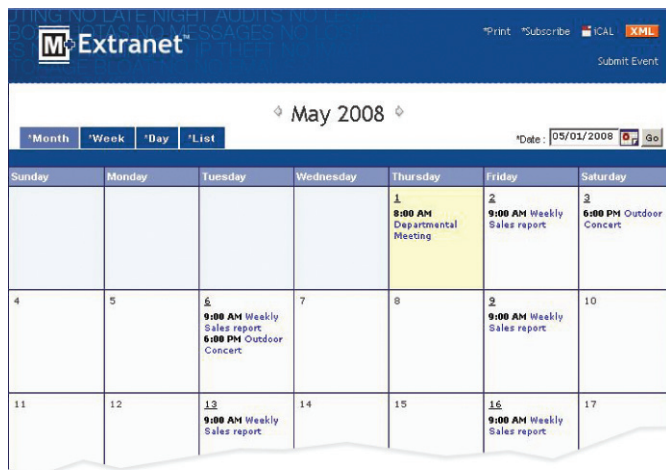

- Reach out to students, faculty, and the local community
- Create an online portal to all campus activities
- Increase event participation and community building
- Give campus groups the ability to manage their own calendars
- Perfect for athletic, academic, and special events calendars

For Business

- Improve employee communication and participation
- Keep track of personal activities and group events
- Integrate GroupWise with your corporate Intranet and web site
- Easy-to-use web interface for employees and managers
- Ideal for HR, marketing, support, and other groups

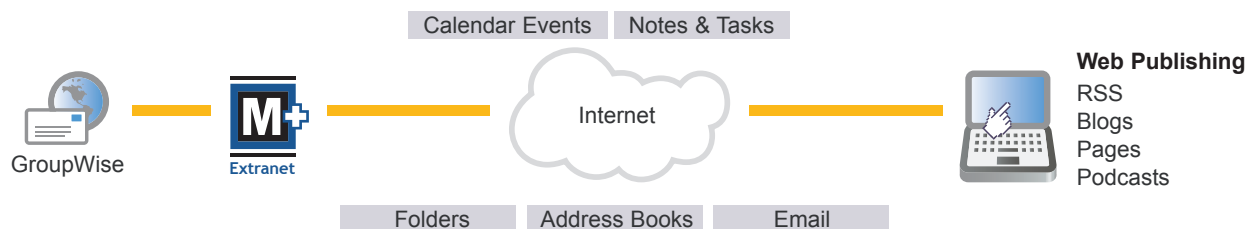

M+Extranet is for you because:

- You need to give a large group of users access to the organization's event calendar, irrespective of whether they use GroupWise or not.
- You conduct web seminars, presentations, or conference calls with students, clients, or suppliers on a regular basis.
- You need to provide additional information associated with calendar entries (meeting agendas, map directions, etc.).
- You need a solution that will offer users the benefits of an open and intuitive web-based calendar.
- You don't need the cost and effort associated with storing and maintaining information on multiple platforms or databases, or content management tools.
- You prefer to implement proven off-the-shelf solutions rather than get involved in protracted and expensive custom development projects.
- You need a scalable solution that will grow seamlessly with your company.
- You want a GroupWise-centric solution that requires no special end-user training.

Server Requirements

- Windows Server 2000/2003 Server/Workstation • Installed Web Server IIS and higher, Apache 2.0 for Windows
- GroupWise 32-bit client (5.x or higher) installed on the Web Server

Product Highlights

GroupWise Calendar Publishing: Calendars can be published in month, list, or table format. M+Extranet also allows for an unlimited number of items per calendar, which can be combined to make composite calendars or color-coded team calendars. The calendar view makes it easy to navigate your personal calendar and your team calendar at the same time.

No GroupWise License Required: With M+Extranet, there are no associated license fees.

New Action-Based Architecture: All M+Extranet features are now represented as actions. This provides a clean and consistent look to published URLs.

Easy To Integrate: M+Extranet is compatible with IIS and Apache Tomcat web services and features an Open Standards XML platform.

Enhanced Security: Role-based authentication via Novell LDAP, Active Directory, or Simple Authentication restricts access to selected calendars, public folders, and weblogs. M+Extranet can publish to an internal site for GroupWise users only or an external site for any user.

Web-Based Administrative Console: Allows users to set default templates, actions, authentication, and more, on a per-account basis.

Rapid Deployment and Setup: A new training guide designed as an instructional course provides step-by-step instructions on installing and configuring M+Extranet.
