

A Better Way to Migrate

Comprehensive Enterprise Migration to GroupWise or Exchange

Included as part of M+Archive, M+Migrator is the “skinny” migration solution: it reduces the time and cost required to migrate users to Novell GroupWise or Microsoft Exchange by archiving data to a central XML repository before the email migration even occurs. As a result, only a fraction of information needs to be moved to the new email system while all information remains available in platform-independent XML format. The use of the XML repository allows 100% transparent communications between the two email systems during the migration period; it is even possible to perform eDiscovery and litigation hold requests while migrating.

M+Migrator can slash an organization’s migration budget by 70%

M+Migrator is included for FREE with M+Archive. This means that for approximately the same price as other third-party migration applications, M+Archive provides archiving and eDiscovery functionality AND a full set of migration tools. Unlike throwaway migration applications, a complete enterprise archiving system is in place at the end of migration when using M+Archive and the M+Migrator. M+Migrator provides additional functionality not available with other migration tools, including direct migration to Exchange 2007 or 2010 without the need for legacy gateway systems, migration between Exchange 2003, 2007, and 2010 migration of personal address books, migration of future re-occurring calendar appointments, and migration of Native GroupWise archives without resorting to PST format.

Legacy Data Management and Email Retention

Leverages the advantages of lower cost storage and access flexibility of M+Archive which allows organizations to address the issues of legacy data management and email retention prior to migration so that email issues are not migrated along with the users.

Automatic Provisioning of Users and Distribution Lists

Gives organizations the ability to automatically provision users and distribution lists to GroupWise or Exchange, including system address books, user accounts, and distribution lists.

Support of Mixed Environments

Supports the deployment of mixed email environments to allow organizations to make the transition to GroupWise or Exchange to suit their business and operational needs.

Uninterrupted Access to the Email

Provides your users with seamless access to their archived email due to its direct integration with major email clients like Outlook Web Access and GroupWise WebAccess.

Less IT Overhead

Allows a migration that is seamless to end users, thereby eliminating the need for IT to train and assist end users. IT simply needs to follow a few easy steps to archive and migrate information to GroupWise or Exchange.

Reduced Risk, Time, and Cost

Reduces the risk of data loss by archiving all information before migrating to GroupWise or Exchange as well as reduces the time and cost associated with email platform migrations.

Regulatory Compliance

Addresses future challenges for archiving and regulatory compliance by offering sub-second search and retrieval of information via a standards-based, 100% compliant architecture.

	M+Migrator	Competition
Migrate email, calendar events, notes	✓	✓
Migrate personal address books and proxy rights	✓	✓
Slash migration timeline and cost	✓	
Migrate native GroupWise archives without using PST format	✓	
Respond to eDiscovery and litigation hold requests during migration	✓	
Simultaneously deploy the migration tool and enterprise archiving solution	✓	
FREE with purchase of your enterprise archiving solution	✓	
Compatible with GroupWise 8	✓	

The Benefits of M+Archive

- Significantly reduces the size of message stores.
- Reduces the risk of data loss by archiving all mail messages first.
- Shortens the migration project timeline by reducing data to be migrated.
- Saves valuable storage capacity through single-instance storage.
- Provides uninterrupted access to email.
- Enables server and user consolidation by ensuring information stores are small.
- Optimizes storage utilization by archiving with intelligent classification, single-instancing, and file compression.
- Retains data in a neutral, non-proprietary format ensuring long-term accessibility.

“Since M+Archive included the email migration tool as part of the archiving licenses, we were able to save about 30% of the migration project investment as we didn’t have to spend additional funds on a single-use migration tool. Because the Messaging Architects’ migration experts took care of the email platform switch and the data migration, my team was free to complete the rest of our infrastructure refresh in time to start the new school year in the new IT environment.”

*Jason Piazza
Director of Network Systems
Deer Park ISD*

“By using M+Archive for our transition from GroupWise to Exchange, we were able to leverage the dollars we saved by not having to invest into a separate migration tool and we were able to extend the email system refresh beyond the original scope of the project. M+Archive allowed us to meet the need to migrate and enable a deployment policy for centralized email retention and electronic discovery. I cannot stress enough how much help M+Archive has been.”
